ALIGNMENTS

The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally: (i) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or-2; and/or (ii) inhibit specifically tyrosine kinase activity of IGF-IR. Ab and its fragments are used to prevent or treat diseases associated with overexpression and/or abnormal activity of IGF-IR and/or receptor (EGFR) and/or with hyperactivity of signal transduction pathways mediated by interaction of insulin-like growth factor-1 receptor; IGF-1R; tyrosine kinase activity; or epidermal growth factor receptor; EGFR; signal transduction pathway; ligand; tumor; cancer; osteosarcoma; complementarity determining region; New antibodies that bind to human insulin-like growth factor receptor, useful for treatment, prevention and diagnosis of cancers. Disclosure; SEQ ID NO 65; 164pp; French. cytostatic; antipsoriatic; antibody; (FABR) FABRE MEDICAMENT SA PIERRE. ADJ76899 standard; protein; 112 AA Anti-IGF-1R related protein #14. Treeperor (IGF-IR) antibody (I) or its functional fragment, being capable of capable of binding to human IGF-IR and, if necessary, capable of capable of binding to human IGF-IR and, if necessary, capable of apable of the human IGF-IR and, if necessary, capable of apable of capable of binding to human IGF-IR and, if necessary, capable of determining region (CMF) consisting of one of two fully defined is amino acids (ADZ67006 and ADZ67014). An antibody of the invention is useful in the preparation of a medicament intended for the prevention or treatment of an illness connected with an overexpression and/or an abnormal activation of the IGF-IR and/or Connected with a ctivation of the IGF-IR and/or EGFR, and/or connected with a ctivation of the IGF-IR and/or EGFR, and/or connected with cinduce or only slightly interaction of the medicament does not induce or only slightly induced to IGF-IR and/or EGF-With IGF-IR and/or EGF-With IGF-IR and/or IGF-With IGF-IR and/or IGF-With IGF-IR and/or IGF-With IGF-IR and/or IGF-With IGF-With
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
relates to a novel isolated anti-insulin-like growth factor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9

                                                                                                                                                                                                                                                                                          The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally: (i) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (ii) inhibit specifically tyrosine kinase activity of IGF-IR. Ab and its fragments are used to prevent or treat diseases associated with overexpression and/or abnormal activity of IGF-IR. Ab and its fragments are used to prevent or IGF-IR and/or epidermal growth factor receptor (EGFR) and/or with hyperactivity of signal transduction pathways mediated by interaction of these receptors with their ligands. Especially they inhibit transformation of tumor cells, so are useful against cancers of the prostate. Unuy, breast, endometrium and colon, also osteosarcoma, and also for treating psoriasis. Ab are also used to diagnose diseases caused by abnormal expression of IGF-IR and/or EGFR. This sequence represents a

The invention relates to a novel isolated anti-insulin-like growth factor I receptor (IGF-IR) antibody (I) or its functional fragment, being capable of binding to human IGF-IR and, if necessary, capable of specifically inhibiting tyrosine kinase activity of the receptor, comprising a light or heavy chain having at least one complementary determining region (CRR) consisting of one of two fully defined is amino acids (ADSG/006 and ADSG/014). An antibody of the invention is useful in the preparation of a medicament intended for the prevention or treatment of an illness connected with an overexpression and/or an abnormal approactivation of the transduction pathway of the signal mediated by the intended of IGF-IR and/or EGER, and/or of EGER, with EGE-IR and/or EGER, and/or of EGER, with EGE-IR and/or EGER, and antibody of the medicament does not induce or only slightly induces secondary effects connected with inhibition of the insulin record intended and antibody is useful for preparation of a medicament intended to inhibit the transformation of normal cells into cells with tumoral character, preferably IGF-dependent, especially IGF and/or IGF2.

Capandent and/or EGF-dependent and/or HERZ/neu-dependent and/or intended for preparation of a medicament intended to inhibit the growth and/or the proliferation of tumor cells, preferably IGF-dependent and/or EGF-dependent and/or EGF-dependent and/or EGF-dependent and/or EGF-dependent and/or IGF2 and/or the proliferation of a medicament intended for the preparation of a medicament intended for the prostate cancer, endometrial cancer or colon cancer. (I) is useful in the preparation of a medicament intended for the specific targeting of a bill preses induced by active compound to the preparation of a medicament intended for the specific targeting of a bill preses induced by a subsensing or overexpr
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              overexpression or an underexpression of the IGF-IR and/or EGFR receptor starting from a biological sample in which the abnormal presence, of IGF-IR and/or EGFR receptor is suspected, which involves contacting the biological sample with (1), which is optionally labeled. The present sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                       Novel isolated anti-insulin-like growth factor I receptor (IGF-IR) artibody or its functional fragment, being capable of binding human IGF-IR and specifically inhibiting tyrosine kinase activity of receptor, useful for treating cancer.

                                                                                                ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally: (1) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (ii) inhibit specifically tyrosine kinase activity of IGF-IR. Ab and its fragments are used to prevent or treat diseases associated with overexpression and/or abnormal activity of IGF-IR and/or epidermal growth factor receptor (EGFR) and/or with their ligands. Especially they inhibit transformation of normal cells to tumor cells, inhibit growth and/or proliferation of tumor cells, so are useful against cancers of the prostate, lung, breast, endometrium and colon, also osteosarcoma, and also by abnormal expression of IGF-IR and/or EGFR. This sequence represents a protein sequence used to generate the Ab of the invention.

```
comprising a light or heavy chain having at least one complementary determining region (CDR) consisting of one of two fully defined 16 amino acids (ADZ67006 and ADZ67014). An antibody of the invention is useful in the preparation of a medicament intended for the prevention or treatment of the preparation of the IGP-IR and/or connected with a cativation of the IGP-IR and/or EGFR, and/or connected with a cativation of the IGP-IR and/or CDR6FR, where the administration of the reasolution pathway of the signal mediated by the interaction of IGF or IGP2 with IGF-IR and/or of EGFR, where the administration of the medicament does not induce or only slightly induces secondary effects connected with inhibition of the insulin control inhibit the transformation of normal cells into cells with tumoral character, preferably IGF-dependent, especially IGF1 and/or IGF2.

CC dependent and/or EGF-dependent, especially IGF1 and/or IGF2.

CC dependent and/or EGF-dependent and/or HER2/neu-dependent calls. (I) is useful for preparation of a medicament intended for prevention or for the treatment of cancer, where the cancer is chosen from prostate cancer, osteosarcome, lung cancer, che cancer, endometrial cancer or colon cancer. (I) is useful in the preparation of a medicament intended for prevention or for the prevention or a medicament colls. (I) is useful in preparation of a medicament colls or preparation of a proper colls o
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               is useful for in vitro diagnosis or illustrate involved of the IGF-IR and/or EGFR receptor overexpression or an underexpression of the IGF-IR and/or EGFR receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9

The invention relates to an isolated antibody (Ab), and its functional fragments, that bind to human insulin-like growth factor-1 receptor (IGF-IR) and optionally: (i) inhibit natural binding of insulin-like growth factors (IGF)-1 and/or -2; and/or (ii) inhibit specifically tyrosine kinase activity of IGF-IR. Ab and its fragments are used to prevent or creat diseases associated with overexpression and/or abnormal activity of IGF-IR. Ab and its fragments are used to prevent or IGF-IR and/or epidermal growth factor receptor (EGFR) and/or with hyperactivity of signal transduction pathways mediated by interaction of these receptors with their ligands. Especially they inhibit transformation of normal cells to tumor cells, inhibit growth and/or proliferation of tumor cells, so are useful against cancers of the prostate, lung, breast, endometrium and colon, also osteosarcoma, and also for treating psoriasis. Ab are also used to diagnose diseases caused by abnormal expression of IGF-IR and/or EGFR. This sequence represents a protein sequence used to generate the Ab of the invention.

Treeptor (IGF-IR) antibody (I) or its functional fragment, being capable of binding to human IGF-IR and, if necessary, capable of capable of binding to human IGF-IR and, if necessary, capable of eapable of binding to human IGF-IR and, if necessary, capable of capable of binding tyoshine kinase activity of the receptor, comprising a light or heavy chain having at least one complementary determining region (CDR) consisting of one of two fully defined 16 amino acids (ADZ67006 and ADZ67014). An antibody of the invention is useful in the preparation of a medicament intended for the prevention or treatment of an illness connected with an overexpression and/or an abnormal activation of the IGF-IR and/or EGF-IR and/or EGF-IR and/or of EGF with EGFR, where the administration of the medicament does not induce or only slightly induced by the interaction of IGPI or IGF2 with IGF-IR and/or of EGF with EGFR, where the administration of the medicament does not induce or only slightly induced secondary effects connected with inhibition of the insulin receptor. The antibody is useful for preparation of a medicament intended to inhibit the grant and/or EGF-dependent and/or HERZ/neu-dependent and/or EGF-dependent and/or HERZ/neu-dependent and/or IGF2-dependent and/or HERZ/neu-dependent cells. (I) is useful in the preparation of a medicament intended for prevention or for the treatment of psoriaals (I) is useful in the preparation of a medicament intended for prevention or colon cancer. (I) is useful in the preparation of a medicament intended for the specific targeting of a biologically active compound to intended for the specific targeting of a biologically active compound to intended for the specific targeting of a biologically active compound to intended in virture of in virtor diagnosis of illnesses induced by an inventor of intended of an intended in the IGF-IR and/or EGF IR and/or CIRZ-IR and/or EGF IR EGF IR and/or EGF IR EARD-IR ALL ALL EGF IR EARD-IR EGF IR EARD
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a novel isolated anti-insulin-like growth factor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           overexpression or an underexpression of the IGF-IR and/or EGFR receptor starting from a biological sample in which the abnormal presence, of IGF-IR and/or EGFR receptor is suspected, which involves contacting the biological sample with (I), which is optionally labeled. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel isolated anti-insulin-like growth factor I receptor (IGF-IR) antibody or its functional fragment, being capable of binding human IGF-IR and specifically inhibiting tyrosine kinase activity of receptor, useful for treating cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Beck A;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    sequence is used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Duflos A, Haeuw J,

This invention describes novel recognition molecules, especially antibodies that bind specifically to the Core-1 antigen. The recognition molecules are used to make constructs containing the framework regions that separate, include and/or flank the specified sequences, especially where the framework regions are from the immunoglobulin (Ig) superfamily, protease inhibitors. Lectims, helix-bundle proteins and/or lipocalins. Most especially the framework regions are from antibodies, particularly the variable heavy chain (WH) and the variable light chain (VL) of human and/or mutine origin. The constructs may also include a His or myc tag, a lysine-rich region and/or a multimerisation domain, most particularly it is a single-chain antibody fragment, multibody, Fab fragment, fusion protein of an antibody fragment with peptide or protein, and/or an Ig of types G, M, A, E or D and/or their subclasses. It may be human, the humanised, murine or chimeric, e.g. IgM without the J chain. The additional sequences/structures in the constructs are Ig domains of various species, interacting or stabilising domains, signal sequences, fluorescent dyes, toxins, antibodies with catalytic activity or other specificities, sycylytic agents, enzymes, immuno-modulators or effectors, MHC molecules, antigens, chelators for radioactive labels, liposomes, transmembrane domains, viruses and/or cells, specifically

            acid encoding them, and related vectors and host cells, are useful for prevention (e.g. as vaccine), diagnosis, alleviation, treatment, monitoring and/or secondary treatment of tumours (specifically of breast, colon, stomach, pancreas, large/small intestine, ovary, cervix, lung, prostate, kidney and/or liver) and/or metastases (particularly to liver), specifically where these are positive for the Ci antigen. The products of the invention provide simple, reliable and efficient detection of tumours. They are specific for carcinoma and show almost no binding to

nouse monoclonal antibody which binds to epidermal growth factor (EGF)
receptor and inhibits binding of EGF), obtainable from the cell line
deposited with the ECACC under accession number 97021428. The humanised
coposited with the ECACC under accession number 97021428. The humanised
corm of the antibody 340 is useful in gene therapy, medicine and in the
manufacture of a medicament for treatment or prophylaxis of cancer. The
invention is useful for treating colorectal, lung, breast, gastric or
covarian cancers or also for preventing the recurrence of cancer after
initial treatment or surgery. The invention is also useful for enhancing
a protective immune response against cancer by optimised immunisation
schedules. The humanised form of the antibody 340 has reduced
immunogenicity but shows similar binding to cells expressing EGF
receptor, as the original murine antibody and has increased ability to
inhibit the growth of EGF receptor expressing cells. The invention is
used as cell growth and apoptosis inhibitor. The present sequence is
mouse monoclonal antibody alpha 340 deimmunised light chain variable (VK)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              9
                                                                                                         New humanized form of mouse monoclonal antibody 340 which binds to epidermal growth factor receptor and inhibits binding of growth factor, useful for treating colorectal, lung, breast, gastric and ovarian cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9

This invention describes novel recognition molecules, especially antibodies that bind specifically to the Core-1 antigen. The recognition molecules are used to make constructs containing the framework regions that separate, include and/or flank the specified sequences, especially where the framework regions are from the immunoglobulin (4g) superfamily, protease inhibitors, lectins, helix-bundle proteins and/or lipocalins. Most especially the framework regions are from antibodies, particularly the variable heavy chain (7H) and the variable light chain (VL) of human and/or murine origin. The constructs may also include a His or myc tag, is a single-chain antibody fragment, multibody, Fab fragment, fusion protein of an antibody fragment, multibody, Fab fragment, fusion protein of an antibody fragment, multibody, Fab fragment, fusion protein of an antibody fragment, multibody, Fab fragment, in advocable and/or an ig of the variable sequences/structures in the constructs are Ig domains of various species, interacting or stabilising domains, signal sequences, considering analytic activity or other analytic a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             specificities, cyanis, autinodies with catalytic activity or other specificities, cytolytic agents, enzymes, immuno-modulators or effectors, MrC molecules, antigens, chelators for radioactive labels, liposomes, transmembrane domains, viruses and/or cells, specifically macrophages. The antibodies, also constructs containing them, nucleic acid encoding them, and related vectors and host cells, are useful for prevention (e.g. as vaccine), diagnosis, alleviation, treatment, monitoring and/or secondary treatment of tumours (specifically of breast, colon, stomach, pancreas, large/small intestine, ovary, cervix, lung, prostate, kidney and/or liver) and/or metastases (particularly to liver), specifically where these are positive for the Cl antigen. The products of the invention provide simple, reliable and efficient detection of
                                                                                                                                                                                                                                                                                                    New recognition molecules, e.g. antibodies (and nucleic acids) that bind specifically to Core-1 antigens, useful for diagnosis, treatment and prevention of tumors and metastases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               They are specific for carcinoma and show almost no binding to

Mouse; humanised form; monoclonal antibody alpha 340; gene therapy; epidermal growth factor receptor; EGF; cancer; colorectal; lung; breast; gastric; ovarian; immune response; cytostatic; cell growth; apoptosis; Mouse monoclonal antibody alpha 340 Vk region variant, 340VKc.

The present invention relates to a humanised form of the antibody 340 (a mouse monoclonal antibody which binds to epidermal growth factor (EGF) receptor and inhibits binding of EGF), obtainable from the cell line deposited with the ECACC under accession number 97021428. The humanised form of the antibody 340 is useful in gene therapy, medicine and in the convertion is useful for treatment or prophylaxis of cancer. The invention is useful for treating colorectal, lung, breast, gastric or ovarian cancers or also for preventing the recurrence of cancer after initial treatment or surgery. The invention is also useful for enhancing a protective immune response against cancer by optimised immunisation schedules. The humanised form of the antibody 340 has reduced immunogenicity but shows similar binding to cells expressing EGF receptor, as the original murine antibody and has increased ability to contain the growth of EGF receptor expressing cells. The invention is cused as cell growth and apoptosis inhibitor. The present sequence is mouse monoclonal antibody alpha 340 deimmunised light chain variable (VK) cregion variant, 340VKc New humanized form of mouse monoclonal antibody 340 which binds to epidermal growth factor receptor and inhibits binding of growth factor, useful for treating colorectal, lung, breast, gastric and ovarian cancer. note= "Wild type Thr substituted with Ser" note= "Wild type Ser substituted with Thr" note= "Wild type Leu substituted with Pro" note= "Wild type Asp substituted with Glu" note= "Wild type Gln substituted with Pro" note= "Wild type Leu substituted with Thr" note= "Wild type Ile substituted with Val" /note= "Wild type Leu substituted with Val" /note= "Wild type Asn substituted with Lys" note= "Wild type Lys substituted with Location/Qualifiers Example 2; Fig 7; 53pp; English 21-MAY-2001; 2001WO-GB002226. 19-MAY-2000; 2000GB-00011981. 24-AUG-2000; 2000GB-00020794.                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to novel humanised antibodies and antibody fragments which react with fibroblast growth factor 8 (FGF8) and inhibit its biological functions. The polypeptides of the invention have cytostatic activity. The antibody is useful for the treatment of cancer, including prostate, breast, ovarian and testicular cancer. The present sequence is used in the exemplification of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     1 DIVMTQSPLSLPVTPGEPASISCRSSQSIVHSNGNTYLQWYLQKPGQSPQLLIYKVSNRL 60

The antibody and method of the invention is useful for: the detection, treatment and prevention of arthritis; as a cartilage protection agent; as a joint destruction inhibitor; and as a synoviral proliferation inhibitor. The present amino acid sequence represents a protein of the invention.

This invention describes novel recognition molecules, especially antibodies that bind specifically to the Core-1 antigen. The recognition concletules are used to make constructs containing the framework regions are from the immunoglobulin (1g) superfamily, where the framework regions are from the immunoglobulin (1g) superfamily, protease inhibitors, lectins, helix-bundle proteins and/or lipocalins. Most especially the framework regions are from antibodies, particularly the variable heavy chain (14) and the variable light chain (11) of human and/or murine origin. The constructs may also include a His or myc tag, a lysine-rich region and/or a multimerisation domain, most particularly it is a single-chain antibody fragment, multibody, Fab fragment, fusion protein of an antibody fragment with peptide or protein, and/or an Ig of types G, M, A, E or D and/or their subclasses. It may be human, conversed, murine or chimeric, e.g. IgM without the J chain. The additional sequences/structures in the constructs are Ig domains of additional sequences/structures in the constructs are Ig domains of specific ities, cytolytic agents, enrymes, immuno-modulators or specificities, cytolytic agents, enrymes, immuno-modulators or effectors, MHC molecules, antibodies with catalytic activity or other specificities, cytolytic agents, enrymes in fine and/or cells, specifically or prevention (e.g. as vaccine), diagnosis, alleviation, treatment. Cc acid encoding them, and related vectors and host cells, are useful for prevention (e.g. as vaccine), diagnosis, alleviation, treatment. Cc acid encoding them, and related vectors and host cells, are useful for prevention (e.g. as vaccine), diagnosis, alleviation, treatment. Cc colon, stomach, pancreas, large/small intestine, ovary, cervix, lung, prostate, kidney and/or superive and post cells, related encoding to prostate, kidney and/or metastases (particularly where these are positive for the Cl antigen detection of the invention provide simple, related encoding the prostate of particularly we

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                   US-10-735-916A-61

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 42, A Sequence 180, Sequence 180, Sequence 181,

Publication No. US20040253234A1

GENERAL INFORMATION:

APPLICANT: KYOWA HAKKO KOGYO CO., LTD

TITLE OF INVENTION: Humanized anti-FGF-8 antibody and the antibody fragment thereof

FILE REFERENCE: 11399WO1

CURRENT APPLICATION NUMBER: US/10/482,105

CURRENT FILING DATE: 2003-12-24

PRIOR PILING DATE: 2001-06-28

NUMBER OF SEQ ID NOS: 41

OM protein - protein search, using sw model

January 10, 2006, 20:28:02; Search time 13.5124 Seconds (without alignments) 797.508 Million cell updates/sec Run on:

1 DVVMTQSPLSLPVTPGEPAS......CFQGSHVPWTFGQGTKVEIK 112 US-10-735-916A-61 Perfect score: Sequence:

283416 seqs, 96216763 residues Gapop 10.0 , Gapext 0.5 Searched:

BLOSUM62

Scoring table:

Total number of hits satisfying chosen parameters:

Minimum DB seq length: 0 Maximum DB seq length: 2000000000

Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries

PIR 80:* 1: pirl:* 2: pir2:* 3: pir3:* 4: pir4:* Database

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
